Jinwoo Lim

APPLIED AI ENGINEER | FORWARD DEPLOYED ENGINEER

devj49i@outlook.com | linkedin.com/in/jinwoo-lim23 | github.com/j1nnnn | j1nnnn.github.io/reactportfolio | Charlotte, NC

PROFESSIONAL SUMMARY

Full-stack engineer with 4+ years building and operating production systems at Wells Fargo's Wealth & Investment Management division, one of the most regulated environments in financial services. Ships AI end to end: a production Claude API agent with its own evaluation framework, and **Pro-Link AI**, a real-time AI swing analysis platform in use by a golf coach in South Korea. Translates ambiguous, high-stakes business problems into shipped software, with production AI agents, RAG pipelines, and agentic workflows. React 18 and TypeScript on the front, Java and Spring Boot on the back, Kafka for event-driven systems. Co-inventor on a granted US patent in financial network security. Pursuing M.S. Analytics (AI/ML) at Georgia Tech.

WORK EXPERIENCE

Pro-Link AI

2026 - Present

Creator and Engineer

Personal project: a real-time AI golf swing analysis platform built for a teaching professional who runs a golf simulator business in South Korea; in use by him in production.

Personal Project, Remote (built for a golf coach in South Korea)

- Built and deployed the platform end-to-end: identified an unmet need for a teaching professional, built the solution from scratch, and deployed cross-culturally to a non-technical user; Next.js 14, React 18, TypeScript, Tailwind CSS, Zustand, Python FastAPI, Pydantic v2, NumPy, SciPy, Turborepo monorepo, Cloudflare Workers
- LLM coaching layer on the Anthropic API (Claude Haiku 4.5): streamed responses, versioned English and Korean system prompts, prompt caching with startup pre-warm, response cache, circuit breaker, rate limiting, per-call token and latency logging, tag-wrapped inputs against prompt injection, and a post-generation check that flags any number not present in the input measurements
- Real-time pose estimation pipeline: Google MediaPipe extracts 33 body landmarks per frame in a WASM Web Worker, handling multi-video processing with timestamp monotonicity constraints
- Zero-downtime private distribution: custom launcher with a state machine (git pull, dependency check, smoke test, service restart, rollback on failure); smoke-test-gated rollouts with automatic rollback; **1,000+ automated tests** (800+ backend, 245 frontend)

Wells Fargo

2023 - Present

Software Engineer | Acting Technical Product Owner

Wealth & Investment Management Technology. Full-stack engineer building business-critical tools for financial advisors, from greenfield architecture through cross-team delivery, in a high-visibility, regulated program.

Charlotte, NC

- Designed a production Claude API agent that generates, validates, and self-heals Playwright test scripts; built the evaluation framework and confidence-gated rollouts
- Drove AI-native development on the team: configured and integrated MCP servers (Jira, Playwright) into the delivery workflow, initiated the team's context-engineering standard (CLAUDE.md plus wiki files giving Claude reliable codebase context and skills), established the integration process for Devin AI, and used GitHub Copilot for day-to-day velocity
- Architected the test-automation framework for the platform (Playwright, TypeScript) as sole architect and SME; it is the hard release gate for a 20-person Agile program, with zero critical defects across every production release; present release readiness to VP-level technology leadership every release cycle
- Building a high-visibility greenfield investment management platform, touching millions in client assets, used by financial advisors across Wells Fargo Wealth & Investment Management to maintain and reallocate client portfolios across account types with distinct regulatory and strategy constraints; built core modules end-to-end (UI, logic, and Spring Boot integration) from scratch under senior leadership, targeting pilot release
- Sole engineer on the platform's most complex module: a multi-persona, role-gated asset allocation and billing workflow enabling financial advisors to reallocate positions, adjust cash and total funding values, and modify billing parameters in real time; orchestrated concurrent REST

API calls to recalculate and reconcile allocation values across multiple upstream data sources

Wells Fargo

2022 - 2023

Technology Analyst

Cloud Modernization & Innovation.
Charlotte, NC

- Co-inventor, US Patent 12,470,530 B2, System and Method for Securing Financial Entity Networks (granted November 2025): identified an architectural gap in enterprise financial network security, engineered the solution, and presented the technical and business ROI to senior leadership for USPTO filing
- Shipped ReClassify (LLM + RAG asset reclassification platform with human-in-the-loop approval) at the WIMT Hackathon: led the team, owned product vision, built full-stack in 48 hours inside a regulated financial environment; placed top 5

PROJECTS

Software Factory

Personal, AI-directed with Claude Code, 2026

Python orchestrator that pulls Linear tickets, triages them with schema-constrained LLM judges (Claude Haiku via JSON schema, plus the TypeSafe Jev judge API), and dispatches headless Claude Code workers into isolated git worktrees with tool allowlists, turn and dollar budget caps, a clean-checkout verify step, and a fail-closed secret scan before opening a draft PR; per-run cost and latency logged to a SQLite ledger; exposed as an MCP server and Claude Code plugin; 443 test functions, 9 ADRs. Live runs opened draft PRs at $0.12-$0.74 per ticket

JEPA

Personal planning agent, in daily trial since October 2026

Python CLI (Typer, httpx) that builds a time-blocked daily plan from calendar and goals and posts check-ins to Discord on a GitHub Actions schedule; Supabase Postgres store with a pg_cron dispatcher; a scheduled Claude Code routine reads the calendar and drives the CLI; 383 unit tests, 6 ADRs, 19 PRs in 15 days

EDUCATION

M.S. Analytics, Computational Data Science / AI/ML track Georgia Institute of Technology — In progress

B.S. Computer Science, Cum Laude New Jersey Institute of Technology — 2018 - 2022

CERTIFICATIONS

Claude Code 101	Anthropic Claude Academy	October 2026
Microsoft Azure Fundamentals AZ-900	Microsoft	
US Patent 12,470,530 B2 (co-inventor), System and Method for Securing Financial Entity Networks	USPTO	

SKILLS

Languages: TypeScript, JavaScript (ES2022+), Java 17, Python 3 (FastAPI), SQL / PL-SQL, R

AI & Agentic: Claude API, LLMs, RAG pipelines, agentic workflows, prompt engineering, evaluation frameworks, MCP servers (Jira, Playwright), context engineering (CLAUDE.md), Claude Code, GitHub Copilot, Computer Vision (MediaPipe pose estimation), DTW / signal processing, NLP, Python ML

Frontend: React 18, Zustand, Angular 15+, RxJS, Next.js 14 (production, Pro-Link AI), Tailwind CSS (production, Pro-Link AI), GraphQL, Module Federation (micro-frontends), Web Workers / WASM, WCAG 2.1

Backend: Spring Boot 3, Spring MVC, REST APIs, Kafka (event-driven), Drools (business rules engine), OAuth 2.0 / JWT, microservices, FastAPI, Pydantic v2

Cloud & DevOps: Docker, Jenkins, Harness CD, CI/CD, PCF / TAS, AWS (familiar), Azure (AZ-900), Cloudflare Workers, Vercel, Splunk, SonarQube
